From yesterday's report:

*"In the near term (on a 1 minute chart) allow for a possible counter trend bounce up tomorrow in an attempt to close the gap (2670) created at the open today. Those Fibonacci targets are:*

- .382 = 2639
- .500 = 2646
- .618 = **2653**"

On cue, the market gapped up and scored another direct hit on our Fibonacci .618 target of **2653** and then reversed course downward!

It's rare that the market does exactly what you think it's going to do so you have to take advantage of it when it does. We moved in and out of the market today trading the waves on 1 minute chart and 5 minute stochastic and Elliott waves. More on that in our Fibonacci Options Day Trader section below.

## Fibonacci Options Day Trader Report

We were in and out of the market 6 times today for a net realized gain of \$2,863.18.

Today we traded the Jan 25th at the money puts.

We bought two 2650 puts in one account at 16.00 and sold them at 19.50 and 19.60.

We bought two 2650 puts in our other account at 15.40 and Sold them at 19.20 and 22.30.

We then bought two 2525 puts at 13.50 and sold at 18.30 and 20.20.

As the market moved up to our .382 retracement level (on a 1 day chart) on a 1 minute chart and the 5 day, 5 minute stochastic moved to overbought again, we bought two more 2625 puts at 15.70 – then watched the rest of the day as the S&P moved up to

the .618 retracement level on a 1 day chart and the .382 retracement level of the decline from the 1/18/19 high (3 day chart). The chart on page one illustrates that the S&P closed right on that retracement level. We are holding those puts overnight.

## **Fibonacci Options Day Trader Report Explained**

We call this the Fibonacci Options Day Trading report, however sometimes we get in and out of a position intraday (within minutes) and sometimes we hold it overnight or for several days. The reason is because we are trading WAVES, and the waves do not know what day it is or when the market closes or opens. A wave can start on one day and continue through to the next day or so before coming to completion. We mostly trade five waves (up or down) on one or five minute charts. These waves could take minutes, hours or days to complete. We try to trade the waves and sell when the S&P reaches our price projection(s). Sometimes it works out great, and sometimes we are wrong. And sometimes, we trade the bigger waves and hold for a longer period of time – especially if we think there is a big move in the larger trend.

### ***Positions for rating services:***

***Long-term*** counts are found on weekly and/or monthly charts and generally cover a time period of years to decades.

***Intermediate-term*** counts are found on daily and/or weekly charts and generally cover a time period of weeks to years.

***Short-term*** counts are found on daily and/or hourly charts and generally cover a time period of days to hours.
